---

## Personal Information:

Currently a second year Creative Informatics Master's student at The University of Tokyo, under the guidance of Prof. Igarashi Takeo. Graduated Tel-Aviv University with a bachelor's in Computer Science and Film (magna cum laude). I am a hardworking, creative and dedicated individual with great communication skills and passion for knowledge.

## Professional Experience:

| | | |
|---|---|---|
| 2023-Present | **Honda Research Int.**<br>Research Internship | Human understanding project for HRI applications. |
| 2021-2022 | **The University of Tokyo**<br>Creative Informatics Researcher | Working on general accessibility related topics to empower and enhance users. |
| 2018-2020 | **Cadence Design Systems**<br>Software engineer | Multicore engine team. Developing semiconductor verification tools that utilize parallel computing. |
| 2015-2017 | **Tel Aviv University**<br>Head of Technology | Investigate software and hardware solutions to assist students with disabilities, while helping them use these. |
| 2012-2013 | **Web Development** | Creating both dynamic and static websites from scratch. Working with HTML 4, CSS 2/3 and JavaScript libraries. |

## Education:

**2022-Present** **The University of Tokyo – M.Sc. in Dep. of Creative Informatics**
*Currently researching accessibility tools to enhance online learning, and examine new HCI methods for users to interact with online learning video content.*

2014-2018 Tel Aviv University – B.Sc. in Computer Science (GPA 90) and Film (GPA 93)

## Publications:

2023 Sechayk Yotam, Shamir Ariel, and Igarashi Takeo. **"Smart Replay: eラーニング動画における視覚的・時間的アクセシビリティの向上"**. The 31th Workshop on Interactive Systems and Software (WISS), 2023.

Large Scale Projects:

**2022 HealthUp (prevent food waste) – Sustainability Cloud Powered Project**

REACT and Django based web application to help prevent food waste and efficiently use food inventory. Manage ingredients and food, find recipes based on inventory list and additional filters, view health attributes of each recipe and handle expired foods correctly.

**2017 LyricEd (learn English through music) – Educational WebApp Project**

A python based web application using various API integrations. The website offers gamification of English learning by giving users tools to complete missing lyrics from a song they choose while listening to that song playing. Users can control level, view scores and track progress. (More: https://github.com/tomfluff/portfolio/tree/master/python/LyricEd)

**2016 Sunny Day (realtime sun protection) – eHealth Application Project**

A Xamarin Forms application integrating the Microsoft Band 2 for sun protection and sun-block reminders. The application's backend was built using Microsoft Azure App Services, including SQL databases and SQLite for cloud sync and Azure Blob services. The project also utilized computer-vision image processing implemented in Python with OpenCV.
